DETAILED ACTION

This action is in response to amendments filed on September 21, 2010.

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the supply valve, the valve switch means and the temperature control means must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

The disclosure is objected to because of the following informalities: The final paragraph on p. 7 is partially repeated at the beginning of p. 8, such that the specification does not flow properly. Examiner notes that this seems to have resulted from the submission of pages 1-7 and pages 8 on from two different sources.

Furthermore, note that the disclosure shall include a detailed description of the invention as required by 37 CFR 1.71, with a description of the preferred embodiment(s) of the invention that adequately and accurately describes the invention. See MPEP 608.01(g). The detailed description of the invention is distinct from the brief summary of the invention, as required by 37 CFR 1.73, which is typically required to set forth the nature and gist of the invention and the advantages of the invention or how it solves problems previously existent in the prior art. See MPEP 608.01(d).

The present detailed description fails to describe in detail the invention, particularly as it relates to the operation of the valve switching means and the supply valve in switching between compression mode and regeneration mode. In conjunction with the objection to the drawings above, the examiner suggests importing paragraphs from the brief summary section of the application that discuss elements not set forth in the detailed description section into the detailed description section, where the elements not shown in the drawings as originally filed may be discussed in greater detail as well.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 2-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 2, the phrase "preferably" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d). Claims 3 and 4 are dependent on claim 2 and incorporate the unclear language.

Allowable Subject Matter

Claims 1, 6-10 and 12 are allowed.

As allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements or specifically traverse each requirement not complied with. See 37 CFR 1.111(b) and MPEP § 707.07(a).
